1 O TEM DOKUMENTU

1.1 Znaki in simboli

V tej pomoči se uporabljajo naslednji znaki in simboli:

Simbol	Oznaka	Pomen
\bigcirc	Nasvet	Nasveti za preprostejše in boljše ravna- nje
	Obvestilo	Osnovne informacije o ravnanju
▶ 1. 2.	Ravnanje	Navodila za ravnanje, ki vsebujejo le en korak. Navodila za ravnanje, ki vsebujejo več korakov, so oštevilčena
\checkmark	Pogoj	Pogoj mora biti izpolnjen
<i>→</i>	Rezultat	Rezultat navodila za ravnanje

1.2 Poudarki

Kombinacije tipk so v besedilu prikazane na naslednji način: **STRG** + **C**. Ustrezna kombinacija tipk za tipkovnico z angleškimi oznakami tipk je navedena v oklepaju (**CTRL** + **C**).

Elementi dialoga v programu so prikazani, kot sledi: zavihek ali okno ali menijski vnos.

Gumbi v programu so prikazani, kot sledi: OK.

2 VTIČNIK GEBERIT BIM CATALOGUE

Vtičnik Geberit BIM Catalogue je namensko zasnovan za Autodesk® Revit®.

S tem vtičnikom je uporabniku Revit® na voljo knjižnica sestavnih delov z izdelki **Geberit** za načrtovanje projektov.

Podatki se pridobivajo neposredno iz sistema PIM Geberit in se uvozijo v Revit®.

3 TEHNIČNI POGOJI

Za namestitev vtičnika morajo biti izpolnjeni naslednji tehnični predpogoji.

Veljajo za različico vtičnika 1.0.0.

Operacijski sistem:	Windows 10
Različica Autodesk® Revit®:	2018.3 ali višja/2019/2020/2021

4 NAMESTITEV

Vtičnik lahko v računalnik namesti le oseba s skrbniškimi pravicami.

- 1. Izberite naslednjo stran v brskalniku in prenesite vtičnik Geberit BIM Catalogue: www.geberit.si/bim.
- 2. Ekstrahirajte preneseno datoteko zip.
- 3. Dvokliknite namestitveno datoteko Setup.exe
 - ✓ Zažene se pomočnik za namestitev.

S	Welcome to the GEBERIT BIM Catalogue Setup Wizard
	The Setup Wizard will install GEBERIT BIM Catalogue on your computer. Click Next to continue or Cancel to exit the Setup Wizard.
	Back Next Cancel

4. Sledite navodilom na zaslonu.

5 UPRAVLJANJE

5.1 Izbira regionalnih nastavitev

Da boste lahko iskali izdelke **Geberit** v Autodesk® Revit® in jih dodajali v svoj projekt BIM, morate najprej izbrati regionalne nastavitve. S temi nastavitvami nato izbirate razpoložljive izdelke iz ponudbe izdelkov **Geberit** za izbrano državo.

	Geberit odsvetuje spreminjanje regionalnih nastavitev v okviru posameznega proj	jekta.
-		
V	V menijski vrstici Autodesk® Revit® kliknite zavihek Add-Ins.

- 6. V oknu BIM Catalogue kliknite Load, da naložite ponudbo izdelkov za izbrano državo.

5.2 Izbiranje izdelkov

Vsi razpoložljivi izdelki v ponudbi izdelkov so podani v obliki drevesne strukture. Drevesna struktura se ujema s strukturo v spletnem katalogu za zadevno državo.

Kategorije izdelkov so v drevesni strukturi prikazane v sivi, izbirne skupine izdelkov pa v črni barvi.

Lučka v stolpcu Image signalizira, ali je izdelek primeren za BIM in ali je na voljo skupina Revit® za prenos.

Simbol	Opis
	Izdelek je primeren za BIM in ga je mogoče uporabiti. Skupina Revit® je na voljo.
	Izdelek je primeren za BIM, vendar ga ni mogoče uporabiti, ker ni na voljo še nobena skupi- na Revit®.
	Izdelek ni primeren za digitalno načrtovanje ali izdelek je bil pred kratkim dodan v ponudbo izdelkov.

Po potrebi lahko pogled v območju **Products of category** prilagodite (glejte »Prilagoditev pogleda v območju Products of category«, stran 11).

5.3 Prilagoditev pogleda v območju Products of category

Privzeto so izdelki v območju **Products of category** prikazani v obliki tabele, skupaj s pripadajočo fotografijo izdelka. Po potrebi lahko ta pogled prilagodite z izbirnima poljema **Orientation** in **Image size**, pa tudi z aktiviranjem oz. deaktiviranjem potrditvenega polja **Show in table mode**.

5.4 Dodajanje izdelkov

- 1. Dvokliknite želeni izdelek v območju Products of category.
 - ✓ Vsi izdelki, ki so primerni za BIM, se prenesejo iz sistema PIM Geberit.
- 2. Kliknite želeno mesto v svojem projektu BIM, da dodate izdelek.

Ko dodate neko cev iz območja Sistemi za oskrbo ali Sistemi odvodnjavanja zgradb, se samodejno prenesejo tudi glavni fitingi oz. fazonski kosi, ki so potrebni za prednastavitve napeljave.

5.5 Anonimiziranje informacij o izdelkih

Javni razpisi večinoma zahtevajo načrtovanje brez navedbe proizvajalca. Vtičnik omogoča preklop med informacijami o izdelkih brez navedbe proizvajalca (LOD300) in z navedbo proizvajalca (LOD400).

- 1. Označite en primer izdelka v svojem projektu BIM.
- 2. V oknu Properties kliknite Edit Type.
 - ✓ Prikaže se okno **Type Properties**.
- 3. V območju Identity Data kliknite potrditveno polje LOD300.
 - ✓ Informacije, kot npr. Article number, Manufacturer, Model in Description, se pri vseh obstoječih primerih izdelka nadomestijo z nevtralnimi informacijami.

Identity Data		\$	
Article number	n/a		
Assembly Code			
Cost			
Description	concealed cistern support frame for toilet

Type Mark			
OmniClass Number	23.45.05.21.11.11		
OmniClass Title	Water Operated Water Closets		
Code Name			

4. Kliknite OK, da potrdite nastavitev.

5.6 Nastavitev višinskega zamika pri montažnih elementih

Montažne elemente **Geberit** Duofix je mogoče izravnavati v navpični smeri z višinsko nastavljivimi nožnimi podporami. Pri tem je mogoče izravnavati višinski zamik v talni nadgradnji v območju 0–20 cm.

Vtičnik omogoča nastavitev tega višinskega zamika po meri za vsak primer posameznega izdelka.

- 1. Označite en primer izdelka ali več primerov elementa Duofix v svojem projektu BIM.
- 2. V oknu Properties v območju Constraints izberite parameter Thickness of finished floor.

Plumbing Fixtures (1)	~	🔠 Edit Type
Constraints		* ^
Front actuation		
Top actuation		
Angle	45.00°	
On Finished Floor Level		
Fastening distance 180mm		
Fastening distance 230mm		
Thickness of finished floor	200.000	
Warning	-	
Level	Level 1	
Host	Level : Level 1	
Offset	0.000	

- 3. Vnesite želeno vrednost za višinski zamik v [mm].
- 4. Če želite uporabiti nastavitve, kliknite Apply.

5.7 Nastavitev referenčne ravnine pri višinskem zamiku

Da se lahko v vaš projekt BIM pravilno prenese višinski zamik montažnih elementov **Geberit** Duofix, morate navesti referenčno ravnino.

Kot referenčno ravnino je mogoče določiti površino neobdelanih tal ali gotova tla.

- 1. Označite en primer ali več primerov elementa Duofix v svojem projektu BIM.
- 2. V oknu Properties izberite območje Constraints.
- 3. Aktivirajte potrditveno polje On Finished Floor Level.
 - ✓ Referenčna ravnina Gotova tla je aktivirana.

Warning	-
Level	Level 1
Host	Level : Level 1
Offset	0.000

4. Če želite uporabiti nastavitve, kliknite Apply.

5.8 Krajšanje fazonskih kosov

Mesta montaže ali mesta vgradnje na gradbišču zahtevajo skrajšanje fazonskih kosov. Vsi fazonski kosi **Geberit** sistemov odvodnjavanja zgradb, ki jih je mogoče skrajšati, imajo mero skrajšanja K, ki določa maksimalno dopustno skrajšanje na priključek.

Vrednosti za maksimalno skrajšanje vsakega fazonskega kosa so razvidne v spletnem in v tiskanem katalogu **Geberit**.

V vtičniku so maksimalne dovoljene mere skrajšanja na priključek razvidne v oknu **Properties** v območju **Dimensions**.

Properties help	Appl	у

1. Označite en primer fazonskega kosa v svojem projektu BIM.

- 2. V oknu Properties v območju Constraints izberite parametre Max cutting length at connection 01.
- **3.** Vnesite vrednost med 0 in maksimalno dovoljeno mero skrajšanja za vsak priključek, ki ga je treba skrajšati.
- 4. Če želite uporabiti nastavitve, kliknite Apply.

Rezultat

✓ Dolžina kraka fazonskega kosa je v vašem projektu BIM prilagojena.

5.9 Upoštevanje izgube pri varjenju pri fazonskih kosih

Pri varjenju plastičnih cevi in fazonskih kosov se del materiala stali. Ta izguba materiala se imenuje izguba pri varjenju. Izgubo pri varjenju je treba upoštevati pri izračunu in s tem tudi pri načrtovanju sistema odvodnjavanja.

Upoštevanje izgube pri varjenju v vtičniku povzroči, da se priključne točke fazonskega kosa v projektu BIM zamaknejo navznoter, s tem pa predstavlja območje izgube pri varjenju. Prilagodi se tudi efektivna dolžina cevi.

- 1. Označite en primer fazonskega kosa v svojem projektu BIM.
- 2. V oknu Properties v območju Constraints izberite parametre Weld loss at connection 01.

- 3. Aktivirajte potrditveno polje za vsak priključek, pri katerem naj bo upoštevana izguba pri varjenju.
- 4. Če želite uporabiti nastavitve, kliknite Apply.

5.10 Razlikovanje med fitingi z enakim nazivnim premerom

V ponudbi izdelkov **Geberit** za Mapress baker in Mapress ogljikovo jeklo so fitingi, katerih pripadajoči artikli imajo enak nazivni premer DN 65.

Tabela 1: Primer za artikle določenega izdelka z enakimi nazivnimi premeri DN 65

Št. artikla	DN	d [mm]	L [cm]	Z [cm]
20112	65	66,7	14,1	9,1
20109	65	76,1	15,9	10,6

Če tak fiting uporabite v projektu BIM, se privzeto doda artikel z manjšim zunanjim premerom.

5.11 Preslikava navoja na nazivni premer

Povezave cevi in fitingov se v programu Revit® izvršijo z nazivnim premerom DN. Pri fitingih, ki se spojijo s cevjo z navojnim priključkom, so mere navoja navedene v palcih. Da lahko preračun v programu Revit® vrne pravilne rezultate, je priporočljivo izbrati dolžinsko enoto s 3 decimalnimi mesti.

- 1. V menijski vrstici Autodesk® Revit® kliknite zavihek Manage.
- 2. Kliknite Project Units.

- ✓ Prikaže se okno Units.
- 3. Pri enoti Length kliknite na stolpec Format.
 - ✓ Prikaže se okno Format.
- 4. Kliknite izbirni seznam Rounding in izberite vrednost 3 decimal places.
- 5. Če želite uporabiti nastavitve, kliknite OK.

6. V oknu Properties v območju Constraints izberite parameter Connection diameter 2.

7. Vnesite priključno vrednost fitinga v palcih skladno s spletnim katalogom.

✓ Preračun se izvrši s 3 decimalnimi mesti in povzroči pravilno preslikavo na pravilen artikel **Geberit**.
